GROVE RT770E

This 65 t (70USt) capacity rough-terrain crane combines the MEGAFORM[™] boom shape with full-power capability. With four-wheel multi-mode steering, and the Full Vision cab optimize mobility and operator confidence on the job site.

Features

> MEGAFORM[™] boom

The superstructure features a full-power fivesection MEGAFORM[™] boom that can reach to a maximum tip height of 44,6 m (146 ft). The sequence synchronized extension features telescopic boom sections via a pedal or single lever control.

> Smooth operation

The RT770E has a quick-reeve boom nose and swingaway alignment device to help operators set up smoothly.

> Extensions

An optional bi-fold swingaway lattice extension easily stows on the side of the base boom for easy transport while providing on-board extension from 10,1 m - 17,1 m (33 ft - 56 ft) for a maximum tip height of 61,6 m (202 ft). By adding the 6,1 m (20 ft) insert, the maximum tip height can be extended to 67,3 m (221 ft).

Job site benefits

Ease of transport

An optional bi-fold swingaway lattice extension easily stows on the side of the base boom for easy transport while providing on-board extension.

By adding the insert of 6,1 m (20 ft) the maximum tip height on the RT770E can be extended even further to 67,3 m (221 ft)

Ease of operation

The full-vision cab, with standard hot water heat and air conditioning, full glass door, tilt / telescoping steering wheel, full gauge and light indicator instrumentation provides the operator with a comfortable working environment and full indication of the crane set-up and working status.

Rugged durability and ease of inspection

Inverted outrigger jacks offers protection of the cylinder rod from sand, dust, oils and various elements on a job site and increases seal life. The outriggers can be spread in three different positions: fully retracted, 50% and 100% open.

The hoist access platform provides safe and easy access to inspect the hoist and wire rope without having to tie off.

6. For pick and carry operation, boom must be centered over front of machine, mechanical swing lock engaged and load restrained from swinging.

7. Axle lockouts must be functioning when lifting on rubber.

8. All lifting depends on proper tire inflation, capacity and condition. Capacities must be reduced for lower tire inflation pressures. See lifting capacity chart for tire used. Damaged tires are hazardous to safe operation of crane.

9. Creep - not over 200 ft of movement in any 30 minute period and not exceeding 1 mph.
